

## **Siltation or Temporary Detention Pond Removal**

### PROCEDURE

1. After approx. 90% of the development has been built out, the Professional Engineer may proceed to decommission the pond. The engineer is to instruct the contractor to complete the work as he has outlined. This work is to be inspected and certified by the engineer.
2. After successful completion of the work the engineer will submit a certified letter to the City.
3. The engineer will advise the developer to have his solicitor submit the necessary release forms to discharge this development pond. The solicitor is to submit documents to the Engineering Department before a building permit is applied for.
